

Hyphen Technology (Pty) Limited

Delivering products that meet your needs

The Financial Activity Control System or FACS is a sophisticated electronic cashbook and a powerful transaction processing engine, which is configurable and may be integrated with your line of business systems and administration environment to enhance business efficiencies.

This platform, regarded as a true differentiator for your Company, reduces development and interface complexity, saving you time and money, while providing a solution specifically crafted to respond to your company's business needs.

Hyphen aims to streamline your business processes and infrastructure for electronic banking into a single functional business tool.

This will aid in minimising risk, optimising efficiency and turnaround time, adding value to your daily administration processes.

Basics done well for you

FACS is configurable to your requirements and can be implemented to address specific payment and collection processes.

The value you're looking for

You can benefit from the system's ability to process and reconcile transactions irrespective of the payment stream, e.g., EFT (payments or collections), cheques, deposits, bank statements, journals, etc. This is done from the same platform, using consistent methods and will simplify your infrastructure requirements, business rules, user training and controls.

Extensive user authority controls and audit reports enable you to manage risk and segregate duties effectively.

A standard part of our service is our ongoing development to ensure that our platform remains current with Client needs and industry regulations.

Hyphen issues message updates that notify the Client where in a transaction life cycle the transaction is. This leads to improved efficiency and enhanced capital management.

Cost savings and efficiency enhancements are derived from our ability to download and reconcile large volumes of bank accounts and generate the General Ledger posting file, as often as you require.

The matching of bank statement is automatically completed, requiring only exceptions to be managed (if any).

Robust systems

- Access to the FACS application is provided through an emulation facility or Web interface.
- Multiple Users can access the application at the same time.
- FACS offers Users a single view of all transaction flows (electronic cashbook).
- Provides constant access to all transactions across all accounts.
- Transactions can be viewed, approved, reversed or changed by authorised Users.
- Enables the creation of ad hoc transactions.
- Extensive enquiry capability.
- View bank account information and transactions as far back as five years.
- Full integration with line of business systems and enables "straight-through" processing and integrity.
- Can be implemented in conjunction with or in place of your existing cashbook or reconciliation within the organisation but in a way that will enrich information flows.

Comprehensive range

FACS allows processing of the following transactions:

Debit Order Collections	Transaction Control
Credit Card	Bank Statement Download
Nominated Account Payments	Real Time Payments
Strong Reconciliation	Branch Deposits
Real Time Gross Settlement	Suspense Management
Transaction Referencing	Transaction Warehousing
Real Time Clearing	Multi-banked statement input
NAEDO/Authenticated Collections	Interoperability Transactional/Data

Client Integration

FACS provides you with a single conduit that links to the four major banks. You submit files in a single format, irrespective of transaction stream or bank, thereby eliminating the need to develop and maintain multiple formats and processes. All the links to the banks are managed by us, and approved transactions are submitted to the banks for processing. Files can also be uploaded through our web portal. FACS can receive information via batch files or web services.

Batch files are validated through:

- batch numbers;
- hash totals;
- file format;
- check digit (previously referred to as account validation using ACB rule - this validates the account and branch number range).

We support multiple transfer protocols.

You will receive an electronic confirmation load report following submission of files into FACS and transactions that have been posted to the bank.

Information can be sent to your line of business system via this integration or via eMail. FACS also supports revenue services integration, i.e., SARS.

Bank integration

Bank statements can be downloaded from the major banks.

You will receive only one message format for all transactions coming from the banks (created from the bank statement). This can include EFT transfers from your Clients, over-the-counter bank branch deposits, online transactions, mobile point-of-sale transaction etc.

Reporting

A comprehensive collection of predefined reports are available but Hyphen can also customise reporting to match your requirements.

Track and trace transactions with us using selection criteria such as amount, user reference, payee name, action date, creation date and status. These criteria can also be used for running reports over the reporting period.

HYPHEN

Transactional Interoperability

To improve collection probability, FACS offers NAEDO Interoperability which automatically switches debit orders that are returned unpaid due to insufficient funds over to the NAEDO tracking module.

Security and administration

Access to functionality and data is maintained and controlled by a security administrator appointed by you.

You are able to control this per bank account, per transaction type, e.g., creditor payments and per transaction method, e.g., EFT with amount limits. Only specified users, as determined by you, are given access to the FACS application.

Segregation of duties - user access control, e.g., Financial Manager and Administrator have different profiles.

Disaster recovery

- Data is replicated onto a back up infrastructure, which is housed off-site in terms of its service delivery application and data storage;

- Replication of data is in real time to a back up site, thus data is as recent as the time that lapsed to recover the new site;
- We switch to our back up site within approximately two hours.

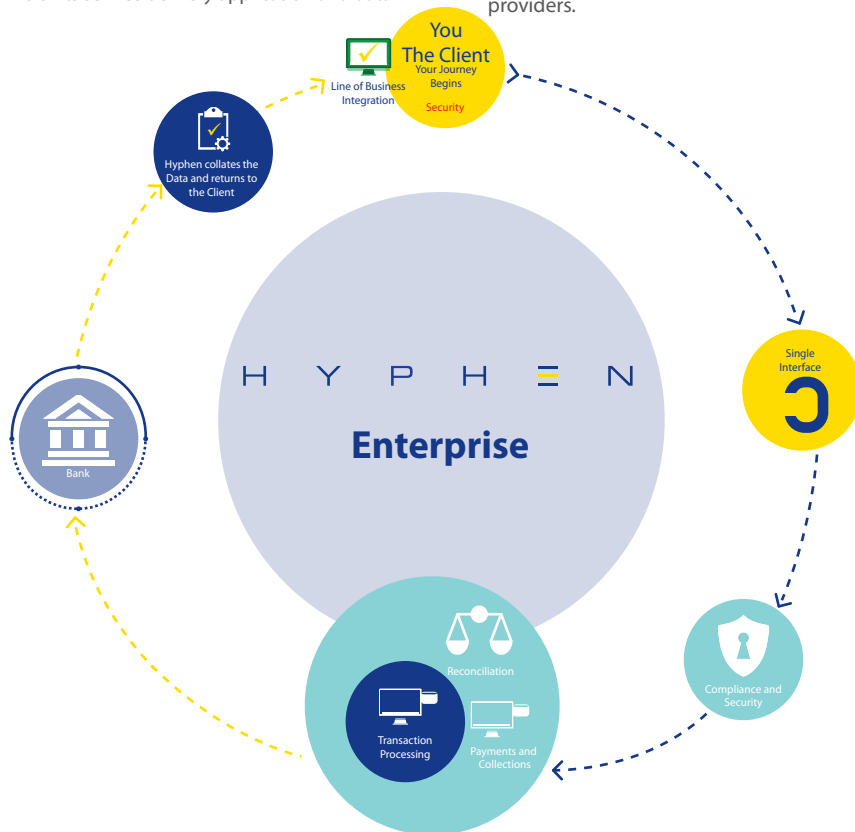

Credible track record

Hyphen processes in excess of 180 million transactions per annum and has built a thorough understanding of the different industries within the marketplace. Its management, sales, operations and customer service personnel have deep industry experience, which enables them to understand the unique needs of both small business entities and large corporate entities.

Quality people with a service ethos

Hyphen strives to exceed your expectations around service and related product offerings by being in tune with your needs and implementing efficiencies that translate into cost savings.

Hyphen provides solutions and services to some of the largest organisations in Southern Africa, including life assurance companies, short-term insurance companies, furniture and retail groups, municipalities, certain banks and prepaid service providers.
